## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gil (U.S. Patent Number 5,500,941) in view of D'Souza (U.S. Patent Number 6,453,468).
4. Gil teaches (col. 4, lines 43-46) a method of performing validation testing to determine the quality of a software system. He also teaches (col. 4, lines 60-62) a usage model for the software system comprising a plurality of usage cases is built and the probability of occurrence of each of the usage cases is calculated. He thus teaches limitations pertain to establishing a software laboratory, receiving software product, and instrumenting the software product to collect a plurality of usage data and plurality of failure data. He also teaches (col. 4, lines 65-67) automatically compiling the usage profile, stimuli, and responses into an automated test program

and generate test cases. He thus teaches limitations pertain to providing the software product and receiving the plurality of usage data and plurality of failure data from users. He does not explicitly disclose issuing a certificate of reliability. D'Souza teaches (col. 26-30) a method of ascertaining a certification level associated with each of the software modules. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to include the method of ascertaining a certification level associated with each of the software modules, thus assigning a certificate of reliability. This is because Gil already teaches as stated above validation testing to determine the quality of a software system, therefore would motivate a person of ordinary skill in the art to utilize the method of D'Souza so assign a certificate of reliability.
